

PROJECT INTRODUCTION

Objectives

To be an important platform for parties interested in Grid to congregate and share their experience in Grid Computing, and explore opportunities for collaboration.

Abstract

This series with the Grid Computing theme caters to a wide spectrum of audience, from the interested individuals, practitioners and user organizations in industry to the research and development community. GridAsia promises to be an exciting major annual event for the region. It will bring together researchers and practitioners in Grid Computing as well as related technologies and applications.

PROJECT DETAILS

Description

The GridAsia series was conceived to provide a platform for interested parties in Grid Computing to interact and share their experience in Grid Computing and multiple ideas for the application of Grid Computing.

The inaugural event in 2005 was a huge success with more than 600 attendees over 4 days. The series consists of 4 tracks.

The Research track consists of international renowned research events such as the International Symposium on Cluster Computing & the Grid (CCGrid) and the International Workshop on Grid Economics & Business Models (GECON).

The Technical track consists of events such as Rocks-A-Palooza (Rocks Developers' All Hands Meeting) and symposia by the Virtual Grid Communities (VGC) covering sectors from Life Sciences, Physical Sciences, Digital Media and Manufacturing.

The Industry track consists of workshops and presentations on issues pertinent to the use of Grid in Industry. Increasingly, vendors are coming forward to organize their own workshop under this track.

The Exhibition track consists of both industry and R&D exhibits. The series has also received very good support by vendors and sponsors.

Collaborating Organisations:

- Agency for Science, Technology And Research
- Infocomm Development Authority
- Nanyang Technological University
- National University of Singapore
- Singapore Management University
